ESTIMATED COMBINED ANNUAL SAVINGS

—

Change in whole-house annual energy costs; no standalone savings are added
A required no-heat-pump baseline is missing, so no combined financial result is calculated. Recalculate the report to restore the comparison.

Per month	Total investment (battery + heat pump)	Payback period	Net after 10 years
—	—	Not available	—

YOUR SITUATION

Solar generation	Annual consumption	Grid export before battery	Electricity purchase price
12.600 kWh/year	8.900 kWh/year	6.100 kWh/year	€ 0,34 per kWh

Feed-in tariff	Selected capacity	Battery investment, incl. installation and VAT
€ 0,08 per kWh	15,9 kWh HYXiPower	€ 999.999 total

SELECTED PRODUCTS AND ENERGY ASSUMPTIONS

Selected battery	**HYXiPower X-Home 15.9 kWh modular high-voltage storage system modular high-voltage storage system modular high-voltage storage system modular high-voltage storage system modular high-voltage storage system modular high-voltage storage system · three phase**
Battery investment, incl. installation and VAT	**€ 999.999**
Additional solar generation	**+8.200 kWh/year · € 29.750**
Additional heat-pump electricity use: Vaillant aroTHERM pro commercial extended configuration high-capacity cascade-ready inverter module weather-compensated hybrid installation package with low-noise outdoor unit and integrated controls	**+4.000 kWh/year · € 109.800**
Additional home EV-charging use	**+6.400 kWh/year · € 18.500**
Entered investment for other products	**€ 148.050**

	Before	After
Annual gas use	**2.150 m³/year**	**466,8 m³/year**
Heat-pump electricity	**0 kWh/year**	**4.000 kWh/year**
Estimated heat-pump electricity coinciding with solar	—	**3.200 kWh/year**
Heat-pump power from solar-charged battery	—	**0 kWh/year**
Heat-pump power from low-price battery charging	—	**0 kWh/year**
Heat-pump grid demand after solar and battery	—	**800 kWh/year**
Fixed gas charges	**€ 510**	**€ 510**
Estimated fixed gas-charge savings	—	**€ 0**
Annual heating/gas costs	**€ 3.628**	**€ 2.347**

Selected product price (VAT incl., after subsidy)	**€ 109.800**
Heat-pump payback (separate)	**85,7 years**

Fixed gas-charge savings apply only if the network operator removes the gas connection and meter. Hybrid systems keep fixed charges.

Annual before-and-after energy costs; this heat-pump saving is shown separately in the combined result.

Vaillant aroTHERM pro published SCOP specifications

RVO Installatiemonitor 3.0: observed hybrid space-heating gas reductions vary by home

Any 10% heat-electricity tariff adjustment is limited to the battery + heat-pump combination with a dynamic contract; the effective rate shown above is the one used in this estimate.

Annual values after planned products

20.800 generation · 30.100 use · 4.300 grid export

User forecast adjusted to the physical annual energy balance

The EV value is added as annual home-charging demand. It does not assume the battery supplies all charger electricity.

Battery-specific · ENERGY ANALYSIS: BEFORE AND AFTER THE BATTERY

CURRENT SITUATION

Without battery

Solar generation total annual generation	**12.600 kWh**
Direct self-consumption 29% of solar generation used	**3.650 kWh**
Demand covered by own solar	**41%**
Sent to grid without battery unused surplus	**6.100 kWh**
Grid electricity purchased paid at the full rate	**5.250 kWh**

WITH HYXIPOWER

With battery

Solar generation same as current situation	**12.600 kWh**
Total self-consumption 3.650 direct + 7.550 battery	**11.200 kWh**
Demand covered by own solar	**93%**
Total battery output (home + EPEX) 0 kWh delivered at home + 0 kWh discharged for EPEX	**8.900 kWh/year**
Battery charge / conversion loss Charge minus conversion losses equals discharge; EPEX charging uses electricity from the grid.	**0 / 0 kWh**
Remaining export after battery use 4.700 kWh less sent to grid after battery storage	**1.400 kWh**
Grid electricity purchased 4.530 kWh less purchased from the grid using battery power	**720 kWh**
Energy savings net self-consumption, excl. EPEX	**+€ 940.000/yr**
Estimated value from dynamic charging and discharging (EPEX) Per month: €18.750,00–€25.833,33	**+€ 225.000–€310.000/yr**

FINANCIAL OVERVIEW

Battery-specific calculation

Step 1 — Base energy savings 4.530 kWh of avoided grid purchases missed export revenue	+€ 940.000
Step 2 — Dynamic-price battery charging and discharging (EPEX) Per month: €18.750,00–€25.833,33 · Indicative estimate	+€ 225.000 – € 310.000/yr
Step 3 — Energy price increase Informative forecast — not in baseline · CBS +5%/yr	€ 45.000 – € 81.000
Step 4 — Net-metering protection Informative forecast — not in baseline · phase-out 2027–2031	€ 27.500
Step 5 — Capacity-based estimate adjustment Based on the capacity assumption in this estimate	+€ 12.500
Annual energy costs without both products	—
Combined annual costs before EPEX battery-trading value	—
Modeled EPEX battery-trading value (included once)	—
Battery investment, incl. installation and VAT	—
Heat pump	—

Total annual benefit

SUMMARY

Battery-specific: HYXiPower X-Home 15.9 kWh modular high-voltage storage system modular high-voltage storage system modular high-voltage storage system modular high-voltage storage system modular high-voltage storage system

Current energy contract	Fixed energy contract
Calculated battery scenario	Dynamic energy contract
Difference from switching to dynamic (included above)	€120.000–€190.000/-yr
Average switching savings per month	€10.000,00–€15.833,33/-month
Solar self-consumption rate now	29%
Solar self-consumption rate with battery	83%
Demand covered by own solar	93%
Grid purchases avoided	4.530 kWh/yr
