Heat-pump results

Vaillant aroTHERM pro commercial extended configuration high-capacity cascade-ready inverter module weather-compensated hybrid installation package with low-noise outdoor unit and integrated controls · 12,0 kW

Indicative estimate

Estimated net annual savings

€1,281

per year

Estimated payback	Selected product price (VAT incl., after subsidy)	10-year net benefit
85,7 years	**€109,800**	**-€96,994**

Before vs after · per year

	Before	After
Annual gas use	**2.150,0 m³/year**	**466,8 m³/year**
Heat-pump electricity	**0 kWh/year**	**4.000 kWh/year**
Fixed gas-connection charges	**€510**	**€510**
Fixed charges saved after connection removal	**—**	**€0**
Annual heating/gas costs	**€3,628**	**€2,347**
Annual savings		**€1,281 / per year**

Fixed-charge savings are included only when you confirm that the network operator will remove the gas connection and meter. Hybrid systems retain these charges.

Performance assumptions

Configuration	**Hybrid**
Estimated annual space-heating demand	**14.800 kWh/year**
Return on investment	**1,2%**
SCOP used	**3,70**
Extra electricity per m³ of gas saved	**2,38 kWh/m³**
Manufacturer label SCOP	**4,80 / 3,70**
Flow temperature	**55 °C**
Boiler efficiency	**90%**
Gas energy content	**9,77 kWh/m³**

Home inputs and sizing assumptions

Home type	**Detached**
Build period	**Before 1975**
Heated floor area	**245 m²**
Total annual gas use	**2.150,0 m³/year**
Estimated space-heating gas	**1.875,0 m³/year**
Insulation	**Average**
Energy label	**C**
Roof insulation	**partial**
Cavity-wall insulation	**none**
Floor/ground insulation	**partial**
HR++ / triple glazing	**double**
Insulated parts	**Roof, Walls, Floor, HR++ / triple glazing**
Heat emitters	**Radiators and mixed emitters with a long customer-supplied description: verification**
Boiler age	**18 years**
Estimated required capacity	**14,5 kW**
Preliminary recommended configuration	**Hybrid**
Electricity contract	**Dynamic**
Stated electricity price	**0,32 €/kWh**
Effective electricity tariff used	**0,29 €/kWh**

Space-heating gas is estimated from total gas use; home details inform preliminary sizing.

Air conditioning heats by air and is not a water-based heat emitter. Have an installer confirm that the proposed system can heat every room and provide hot water.

Energy prices used

Gas	**€1.45 /m³**
Effective electricity tariff used	**€0.29 /kWh**
Catalog price incl. VAT	**€128,750**
Subsidy	**€18,950**
Product price after subsidy	**€109,800**
Investment used in this calculation	**€109,800**

Subsidy estimate for this test only: the final amount depends on the selected product code, installation date, application requirements, proof of payment, and the current official scheme. The amount shown is not a guarantee of eligibility or approval. The installer and homeowner must verify the applicable conditions and submit the required documents to the relevant authority. This intentionally long note checks that subsidy explanations wrap inside the PDF price section.

Other planned products

Planned solar generation · Annual amount	**8.200 kWh/year**
Planned solar generation · Separately entered cost	**€29,750**
Planned home EV charging use · Annual amount	**6.400 kWh/year**
Planned home EV charging use · Separately entered cost	**€18,500**

Solar and EV plans are shown for context; they do not affect this heat-pump estimate.

Estimate assumptions

Indicative estimate; actual energy use, tariffs and costs may differ. Maintenance is not included.

Standardized SCOP is not a forecast of your home's actual performance.

RVO Installatiemonitor 3.0 reported an average reduction in gas used for space heating in hybrid homes; individual results vary.
